

Stormproof windows

Stormproof windows feature rebated openers which lip over the front face of the window frame.

Their place in British fenestration can be traced back to the 1950's when modern production systems demanded a window with greater tolerances that could be manufactured economically in volume.

Many modern timber window systems, as well as most PVCu and aluminium replacement windows, are modelled on the stormproof design and as such stormproof windows have become a familiar feature in British homes.

Although visually different, our stormproof system shares the same advanced technology as our flush casement window – technology that brings the benefits of security, warmth, warp resistance, weathering and glazing performance.

Technical summary:

Hardwood, softwood or oak • multi-layer timber sections • fully drained and vented • dummy sashes to all fixed areas • internally beaded • multi-point perimeter locking • unobtrusive pivot hinges • factory glazed with argon gas filled sealed units comprising soft coat energy saving glass and warm edge spacer bars to give 1.1 W/m²K U-value • factory finished with preservative, primer and two coats of micro-porous paint • period ironmongery available.
